

Homework 8 - DeFi / Token Program

General Questions (Discuss in your teams)

1. How in practice can the DEX design differ between Solana and Ethereum?
2. What features would you look for when selecting a Solana wallet?
 1. Does any wallet have all these features ?
 2. Which wallet have you chosen ?
3. How is the token functionality design process different on Solana?
4. Which Solana DeFi project has the most value locked ?
5. What difference do low fees on a blockchain make to trading strategies ?

Tasks

1. Follow the instructions from the lesson and use the `spl-token-cli` to create
 - a) A fungible token with a supply of 10,000
 - b) An NFT
2. Try sending these tokens to others in your team , and use the command line to find details about the tokens.
3. Try sending using both the `transfer` and `transfer --fund-recipient` approach.
