

Homework 9

Tasks

1. Modify the existing `msg!` in `example1-helloworld` to log the program ID.
2. Retrieve the total program size of `example1-helloworld`.
3. Retrieve the lamport balance of `example2-counter`.
4. Modify the client for `example2-counter` to feed an incorrect address for the greeting account to the program.

hint use

```
solana account <ADDRESS>
```

to find out more about a given address content
