Homework 11

1. Investigating Dapp Scaffold

You need to install a wallet plugin in your browser, such as phantom
Follow the installation instructions in Lesson11 notes.

Try following the functionality it provides

1. Make sure your wallet is connected to the dev network
2. Try the airdrop to give yourself some SOL
3. Try to sign a message

Try altering the code to send a transaction to send to a hardcoded address
You can create a public key from a String, such as
`5xot9PVkphiX2adznghwrAuxGs2zeWisNSxMW6hU6Hkj`
See

https://docs.solana.com/developing/clients/javascript-reference#publickey

Look for the transactions on the devnet blockchain explorer.
